

**Calculation of Urban Water Supplier's Conservation Standard
Supply Reliability for Three Additional Years of Drought**

Step 1: Determine Total Potable Water Demand (used in Step 3)

Potable Water Production in Calendar Year 2013	1420.68	MG
Potable Water Production in Calendar Year 2014	1508.56	MG
Total Potable Water Demand	1464.62	MG
<i>= ([Potable Water Production 2013]+[Potable Water Production 2014])/2</i>		

Step 2: Calculate Total Potable Water Supply

Potable Water Supply	Year 1	Year 2	Year 3
Local Surface Water (million gallons)	N/A	N/A	N/A
Imported Water (million gallons)	1441.9	1441.9	1441.9
Groundwater (million gallons)	613	613	613
Total Potable Water Supply (million gallons)	2054.9	2054.9	2054.9
<i>= [Local Surface Water]+[Imported Water]+[Groundwater]</i>			

Step 3: Calculate Conservation Standard

Total Potable Water Demand (from Step 1)	1464.62	MG
Total Potable Water Supply (from Step 2)	2054.9	MG
Supply Shortfall in Year 3 (negative amount indicates a surplus)		
<i>= [Total Potable Water Demand]-[Total Potable Water Supply]</i>	-590.28	MG

Conservation Standard with Self-Certification of Supply Reliability

= [Shortfall in Year 3] / [Total Potable Water Demand] **0%**

Step 2 of Water Supply Reliability Certification and Data Submission Form

<< Enter name of urban water supplier

User Input Instructions

- (1) Please select units of measure from the dropdown menu.
- (2) Enter information on available water supplies and supplies committed to other uses.

Surface water: other (describe)		Select Y/N					
Local Groundwater	Well Production	Yes	613.0	613.0	613.0		
Seawater Desalination		Select Y/N					
Transfers		Select Y/N					
Exchanges		Select Y/N					
Other (describe):		Select Y/N					
SUBTOTAL of available supplies (in units selected)			2,054.9	2,054.9	2,054.9		

<< Complete groundwater tab

<< To add more self-supplied sources, insert as many rows

* Any carryover from one year is incorporated in the supply of the following year, as legally allowed.

** Look up Water system number at this link: <https://sdwis.waterboards.ca.gov/PDWW/>

Rows can be inserted to account for other sources of supply (e.g., desalination of brackish water, banked water)

If a source has not been used in prior years, e.g., a new treatment facility will be constructed, supporting documentation must document when the new source will be fully implemented.

Water Supplies Committed to Other Uses (Not Available)

Other Uses	Describe	Quantity in WY 2017	Quantity in WY 2018	Quantity in WY 2019
Agriculture				
Commercial, industrial or institutional

>> If error, verify you have selected units of measure

City of Hawthorne Supporting Analysis and Calculations		
Well ID	Design Flow (GPM)	Mgals
1	2000	841
	Total	841

Groundwater Supply Notes

We project that 613 million gallons (MG) will be available annually from groundwater sources in 2017, 2018, and 2019. This is a figure (841 MG) based on 80% of the capacity of currently active wells run 24 hours a day, 7 days a week, capped at the adjudicated pumping right of 613 MG.
