

2013 Water Conservation Report: Antelope Valley District

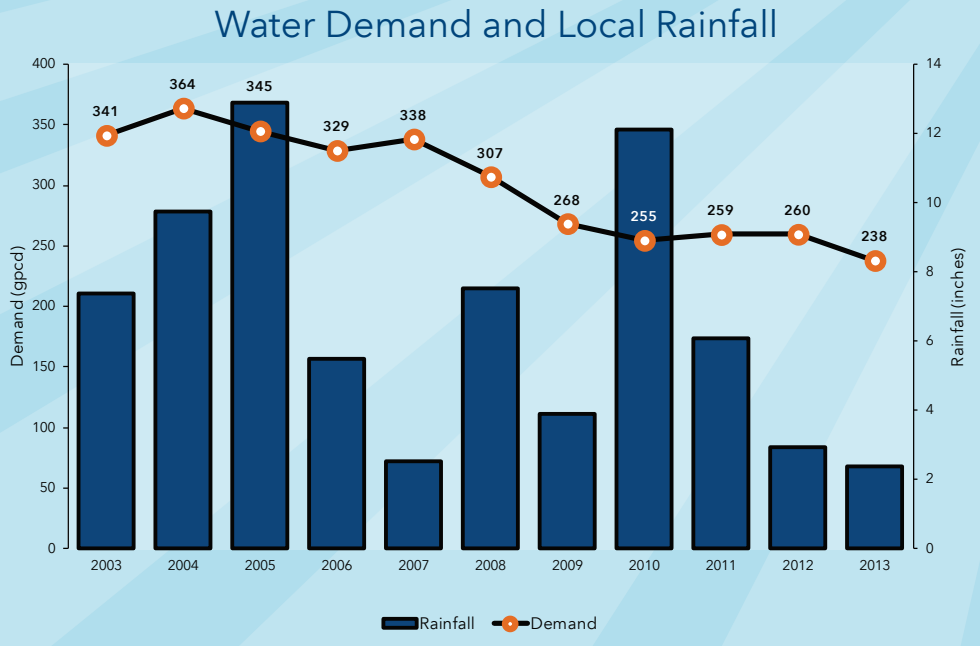

Cal Water's conservation programs are designed to meet 2020 urban water use reduction requirements and increase long-term supply reliability. Programs implemented in 2013 saved approximately 745 thousand gallons of water and are expected to save 11 million gallons (MG) over their lifetime.

2013 Annual & Lifetime Water Savings

Statewide policies and agreements mandate water utilities to significantly reduce per capita urban water demand (gpcd: gallons per capita per day) by 2020. Over the last several years, water use has declined. Changes in demand can be attributed to a number of factors, including, but not limited to, economic conditions, public awareness, climate, and implementation of conservation programs.

Cumulative Water Savings

Water savings from most Cal Water conservation programs continue well after implementation. In Antelope Valley, 2.5 MG of water have been conserved as a result of programs implemented in 2011, 2012, and 2013. These programs are expected to save approximately 15 MG over their lifetime.
